

CLAIMS:

1. An outside handle device comprising:
a handle portion provided at the outside of a vehicle door; and
a handle frame fixed to the vehicle door and supporting the handle portion via an arm portion provided on the handle portion
, wherein the arm portion is provided with an engaging means, the handle frame is provided with the engaged means which designates an assembling direction of the arm portion by engaging with the engaging means.
2. An outside handle device according to claim 1, wherein the engaging means and the engaged means respectively correspond to a protrusions and groove which guides the protrusions, and the engaging means and the engaged means respectively correspond to a groove which guides the protrusions and a protrusions.
3. An outside handle device according to claim 1, wherein an electrical component is accommodated in the handle portion, the arm portion is rotatably provided with a first connecting portion electrically connected to the electrical component accommodated in the handle portion, the handle frame is provided with a second connecting portion electrically connected to the first connecting portion by engaging with the first connecting portion.
4. An outside handle device according to claim 2, wherein an electrical component is accommodated in the handle portion, the arm portion is rotatably provided with a first connecting portion electrically connected to the electrical component accommodated in the handle portion, the handle frame is provided with a second connecting portion electrically connected to the first connecting portion by engaging with the first connecting portion.

5. An outside handle device according to claim 3, wherein the first connecting portion is provided on the arm portion so as to be surrounded by an internal surface of the arm portion.
6. An outside handle device according to claim 4, wherein the first connecting portion is provided on the arm portion so as to be surrounded by an internal surface of the arm portion.
7. An outside handle device according to claim 1, wherein the handle portion is fixedly supported by the handle frame.
8. An outside handle device according to claim 1, wherein the handle portion is movably supported by the handle frame so as to be movable relative to the handle frame.
